precision measurements of the higgs boson's properties are a powerful tool to look for deviations from the predictions of the standard model (SM) of particle physics the 139 fb of proton-proton collision data which have been collected by the ATLAS experiment during run 2 of the LHC offer an opportunity to investigate rare higgs boson topologies which are particularly sensitive to new physics scenarios but experimentally difficult to access several such measurements which target higgs boson decays to heavy flavour quarks as well as their combinations are presented in this thesis a novel analysis that measures higgs boson production in association with a heavy vector boson  $V$  ( $VH$ ) with  $V = W, Z$  at high energies is presented dedicated higgs boson reconstruction techniques are applied to reconstruct the highly Lorentz boosted higgs boson decays into pairs of bottom quarks the measurement is subsequently combined with a  $VH$  cross section measurement at low and intermediate  $p_T$  to provide a differential cross section measurement in kinematic fiducial volumes over the largest possible  $p_T$  range all cross section measurements agree with the SM predictions within relative uncertainties that range from 30 to 300 the results are furthermore interpreted as limits on the parameters of a SM effective field theory finally a combination of measurements of higgs decays to heavy flavour quarks is used to experimentally determine that the higgs boson coupling to charm quarks is weaker than to bottom quarks as predicted by the SM the target audience for the thesis are physicists and physics students in particular those with a background in high energy physics

this comprehensive volume summarizes and structures the multitude of results obtained at the LHC in its first running period and draws the grand picture of today's physics at a hadron collider topics covered are standard model measurements higgs and top quark physics flavour physics heavy

ion physics and searches for supersymmetry and other extensions of the standard model emphasis is placed on overview and presentation of the lessons learned chapters on detectors and the LHC machine and a thorough outlook into the future complement the book the individual chapters are written by teams of expert authors working at the forefront of LHC research

This book reports on the search for a new heavy particle the vector like top quark  $V_{LT}$  in the large hadron collider LHC at CERN the signal process is the pair production of  $V_{LT}$  decaying into a Higgs boson and top quark  $tt$   $ht$   $xx$   $ht$   $wb$   $zt$  the signal events result in top antitop quarks final states with additional heavy flavour jets the book summarises the analysis of the data collected with the ATLAS detector in 2015 and 2016 in order to better differentiate between signals and backgrounds exclusive taggers of top quark and Higgs boson were developed and optimised for  $V_{LT}$  signals these efforts improved the sensitivity by roughly 30 compared to the previous analysis the analysis outcomes yield the strongest constraints on parameter space in various BSM theoretical models in addition the book addresses detector operation and the evaluation of tracking performance these efforts are essential to properly collecting dense events and improving the accuracy of the reconstructed objects that are used for particle identification as such they represent a valuable contribution to data analysis in extremely dense environments

CAC series highlights new advances in the field this volume 94 presents interesting chapters on the recent advances in the role of nanoparticles in plant biotechnology each chapter is written by international experts in the respective fields provides the authority and expertise of leading contributors from an international board of authors presents the latest release in the comprehensive analytical chemistry series updated release includes the latest information on biosynthesized nanomaterials

Surface modification and functionalization of ceramic composites is intended for both experts and beginners allowing them to have an extended overview of recent progress in the evolution of surface modification methods and functionalization for ceramic composites the book provides a detailed summary of the various techniques that are currently available along with an evaluation of the costs involved information on the relationship between surface properties and function is also discussed there is also an additional section on commercial and industrial applications including biomedical sensing and energy the book will be a valuable reference resource for researchers and an instructive and stimulating text for postgraduate students

who want to enhance their knowledge on novel materials and surface modification and functionalization of ceramic composites extensively covers surface modification and functionalization of ceramic composites a detailed review of the various techniques currently available and an evaluation of costs covers recent advances and a broad range of different industrial applications
