even before the outbreak of the covid 19 pandemic the central region faced numerous obstacles to building a stable and prosperous future the region which encompasses the middle east the horn of africa central asia and south asia has been plagued by economic and political uncertainty amidst dramatic shifts in the global power structure with the pandemic now exacerbating the volatility in this already fragile region the u s s strategic objectives are rife for re examination a complicated stew of factors such as weakening of established governance systems the emboldening of extremist individuals and groups through advances in digital technology the humanitarian crises in afghanistan and syria and the intensification of the great power competition with china and russia are creating a fertile environment for the growth of violent extremist organizations veos such organizations take advantage of vulnerable aggrieved and traumatized populations to fuel radicalization recruitment and unrest which further undermine stability and the potential for peace and prosperity while it is still early to fully understand how the ongoing response to the covid 19 pandemic will impact u s policy this book provides a timely analysis of relevant dynamics such as popular radicalization digital information ecosystems networks of influence and new capabilities to recognize and prepare for other such black swan events in the region

anyone who claims the right to choose how to live their life excludes any purely deterministic description of their brain in terms of genes chemicals or environmental influences for example when an author of a text expresses his thoughts he assumes that in typing the text he governs the firing of the neurons in his brain and the movement of his fingers through the exercise of his own free will what he writes is not completely pre determined at the beginning of the universe yet in the field of neuroscience today determinism dominates there is a conflict between the

daily life conviction that a human being has free will and deterministic neuroscience when faced with this conflict two alternative positions are possible either human freedom is an illusion or deterministic neuroscience is not the last word on the brain and will eventually be superseded by a neuroscience that admits processes not completely determined by the past this book investigates whether it is possible to have a science in which there is room for human freedom the book generally concludes that the world and the brain are governed to some extent by non material agencies and limited consciousness does not abolish free will and responsibility the authors present perspectives coming from different disciplines neuroscience quantumphysics and philosophy and range from those focusing on the scientific background to those highlighting rather more a philosophical analysis however all chapters share a common characteristic they take current scientific observations and data as a basis from which to draw philosophical implications it is these features that make this volume unique an exceptional interdisciplinary approach combining scientific strength and philosophical profundity we are convinced that it will strongly stimulate the debate and contribute to new insights in the mind brain relationship
