corporate finance theory seeks to understand how incorporated firms address the financial constraints that affect their investment decisions this is achieved by using varied financial instruments that give holders different claims on the firm s assets recent scholarship in this area explores precisely how legal mechanisms affect corporate finance and the development of financial markets the legal environment is crucially important in explaining the choices that companies make about their capital structure this book combines company law capital market regulation and commercial law to give readers a detailed understanding of the legal and regulatory issues relating to corporate financial transactions informed by insights from the theoretical and empirical work of financial economists the book examines from a legal

perspective key elements of corporate financing structures and capital markets in the uk the authors practical experience of transactions and regulatory issues ensures that thorough scholarly inquiry and critical reflection are complemented by an assured understanding of the interface between legal principles and rules as they are documented and in their actual operation

the series structure and bonding publishes critical reviews on topics of research concerned with chemical structure and bonding the scope of the series spans the entire periodic table and addresses structure and bonding issues associated with all of the elements it also focuses attention on new and developing areas of modern structural and theoretical chemistry such as nanostructures molecular electronics designed molecular solids surfaces metal clusters and supramolecular structures physical and spectroscopic techniques used to determine examine and model structures fall within the purview of structure and bonding to the extent that the focus is on the scientific results obtained and not on specialist information concerning the techniques themselves issues associated with the development of bonding models and generalizations that illuminate the reactivity pathways and rates of chemical processes are also relevant the individual volumes in the series are thematic the goal of each volume is to give the reader whether at a university or in industry a comprehensive overview of an area where new insights are emerging that are of interest to a larger scientific audience thus each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole the most significant developments of the last 5 to 10 years should be presented using selected examples to illustrate the principles discussed a description of the physical basis of the experimental techniques that have been used to provide the primary data may also be appropriate if it has not been covered in detail elsewhere the coverage need not be exhaustive in data but should rather be conceptual concentrating on the new principles being developed that will allow the reader who is not a specialist in the area covered to understand the data presented discussion of possible future research directions in the area is welcomed review articles for the individual volumes are invited by the volume editors readership research scientists at universities or in industry graduate students special offer for all customers who have a standing order to the print version of structure and bonding we offer free access to the electronic volumes of the series published in the current year via springerlink

nanomagnetic materials fabrication characterization and application explores recent studies of conventional nanomagnetic materials in spintronics data storage magnetic sensors and biomedical applications in addition the book also reviews novel magnetic characteristics induced in two dimensional materials diamonds and those induced by the artificial formation of lattice defect and heterojunction as novel nanomagnetic materials nanomagnetic materials are usually based on d and f electron systems they are an important solution to the demand for higher density of information storage arising from the emergence of novel technologies required for non volatile memory systems advances in the understanding of magnetization dynamics and in the characteristics of nanoparticles or surface of nanomagnetic materials is resulting in greater expansion of applications of nanomagnetic materials including in
