electromagnetic materials have both civilian and defence applications such as novel antenna designs and protection against high power transients in densely packed printed circuits for certain applications the materials may be required to have special frequency response or polarization response to meet the component or system specifications an in depth understanding of the responses of materials to electromagnetic waves may even enable us to design and fabricate materials with properties not found in nature this book constitutes the proceedings of the symposium on electromagnetic materials which provided a forum for scientists and engineers to report the latest research findings to exchange ideas and information and to establish research links

this book on solid state physics has been written with an emphasis on recent developments in quantum many body physics approaches it starts by covering the

classical theory of solids and electrons and describes how this classical model has failed the authors then present the quantum mechanical model of electrons in a lattice and they also discuss the theory of conductivity extensive reviews on the topic are provided in a compact manner so that any non specialist can follow from the beginning the authors cover the system of magnetism in a similar way and various problems in magnetic materials are discussed the book also discusses the ising chain the heisenberg model the kondo effect and superconductivity amongst other relevant topics in the final chapter the authors present some works related to contemporary research topics such as quantum entanglement in many body systems and quantum simulations they also include a short review of some of the possible applications of solid state quantum information in biological systems

the presence of considerable time delays in many industrial processes is well recognized and achievable performances of conventional unity feedback control systems are degraded if a process has a relatively large time delay compared to its time constants in this case dead time compensation is necessary in order to enhance the performances the most popular scheme for such compensation is the smith predictor but it is unsuitable for unstable or lightly damped processes because the compensated closed loop system always contains the process poles themselves an alternative scheme for delay elimination from the closed loop is the finite spectrum assignment fsa strategy and it can arbitrarily assign the closed loop spectrum one may note that the smith predictor control can be found in delay systems control books and many process control books but the fsa control is rarely included in these books it is therefore timely and desirable to fill this gap by writing a book which gives a comprehensive treatment of the fsa approach this is useful and worthwhile since the fsa provides not only an alternative way but also certain advantages over the smith predictor the book presents the state of the art of the finite spectrum assignment for time delay systems in frequency domain it mainly contains those works carried out recently by the authors in this field most of them have been published and others are awaiting publication they are assembled together and reorganized in such a way that the presentation is logical smooth and systematic

the pacific symposium on biocomputing brings together key researchers from the international biocomputing community psb is designed to be maximally responsive to the need for critical mass in subdisciplines within biocomputing these proceedings contain peer reviewed articles in computational biology

during recent decades we have witnessed not only the introduction of automation into the work environment but we have also seen a dramatic change in how automation has influenced the conditions of work while some 30 years ago the addition of a computer was considered only for routine and boring tasks in support of humans the balance has dramatically shifted to the computer being able to perform almost any task the human is willing to delegate the very fast pace of change in processor and information technology has been the main driving force behind this development advances in automation and especially artificial intelligence ai have enabled the formation of a rather unique team with human and electronic members the team is still supervised by the human with the machine as a subordinate associate or assistant sharing responsibility authority and autonomy over many tasks the requirement for teaming human and machine in a highly dynamic and unpredictable task environment has led to impressive achievements in many supporting technologies these include methods for system analysis design and engineering and in particular for information processing for cognitive and complex knowledge 1 engineering

by conference chairman n1 it is my pleasure to introduce this volume of proceedings for the 33 matador conference the proceedings include 83 refereed papers submitted from 19 countries on 4 continents 00 the spread of papers in this volume reflects four developments since the 32 matador conference in 1997 i the power of information technology to integrate the management and control of manufacturing systems ii international manufacturing enterprises iii the use of computers to integrate different aspects of manufacturing technology and iv new manufacturing technologies new developments in the manufacturing systems area are globalisation and the use of the to achieve virtual enterprises in manufacturing technology the potential of the following processes is being realised rapid proto typing laser processing high speed machining and high speed machine tool design and at the same time in the area of controls and automation the flexibility and integration ability of open architecture computer controllers are creating a wide range of opportunities for novel solutions up to date research results in these and other areas are presented in this volume the proceedings reflect the truly international nature of this conference and the way in which original research results are both collected and disseminated the volume does not however record the rich debate and extensive scientific discussion which took place during the conference i trust that you will find this volume to be a permanent record of some of the research carried out in the last two years and

ic sec 2002 serves as a forum for engineers and scientists who are involved in the use of high performance computers advanced numerical strategies computational methods and simulation in various scientific and engineering disciplines the conference creates a platform for presenting and discussing the latest trends and findings about the state of the art in their particular field s of interest ic sec also provides a forum for the interdisciplinary blending of computational efforts in various diversified areas of science such as biology chemistry physics and materials science as well as all branches of engineering the proceedings cover a broad range of topics and an application area which involves modelling and simulation work using high performance computers

this book presents the latest research on adsorption science and technology it covers various aspects of materials solid characterization equilibria kinetics determination and new processes

human biology has now entered into a phase of post genomics and it might not be an exaggeration to say that the major outcome of the human genome sequencing has finally been to open the way to the exploration of the proteome proteomics proteins are the functional output of genes and there are two main expected outcomes from human proteomics the first is to discover new molecular markers for early diagnosis and profiling of pathologies the second is to decipher the intracellular signaling pathways leading to the initiation and progression of pathologies for the identification of new targets and the development of innovative

therapeutic strategies this is clearly a promising challenge that this book explores through a series of ongoing experiences and projects representative of the new era in which biology and medicine have now entered
